

By using water wisely, you not only help preserve our natural resources, but also save money.

During your water survey appointment, you will receive some of the following:

- Low-flow showerheads if needed
- Faucet aerators if needed
- Drip gauge to measure faucet leaks
- 5-minute shower timer
- Sponge
- Water and energy saving literature
- Xeriscape information, including a list of low-water use plants
- Hose end nozzle, if needed
- California native plant seeds
- Plumbing handbook

The Residential Water Survey Program is sponsored by the City of San Diego Water Conservaton Program with support from the San Diego County Water Authority. Call for an appointment today, and let us help you save water and money!

THE CITY OF SAN DIEGO

Water Department
Water Conservation Program

All Water Conservation information materials are available in alternate formats upon request.

**Have you had
your FREE
Residential
Water Survey?**

**How to help
preserve
our natural
resources,
and save
money.**

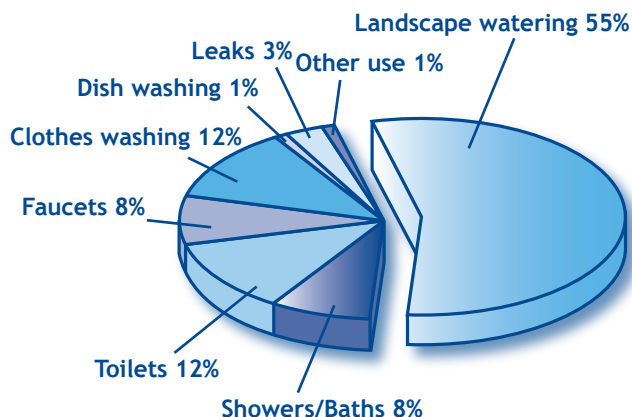

The Residential Water Survey Program is a FREE service offered through the City of San Diego Water Department to help you save water inside and outside your home, and lower your water bill.

This city-wide program is available to our single-family and small multi-family customers.

During the water survey appointment you will learn how to use water more efficiently.

A typical participating household can reduce their average daily water consumption by 13% or more.

Typical Water Use in a Single Family Home

During your appointment, the surveyor will teach you how to read the water meter, and show you how to determine if you have a property side leak.

619-570-1999

Interior Survey

The surveyor will:

- Check showerheads and faucets for leaks and flow rates
- Provide low-flow showerheads if needed
- Check leaks in toilets
- Determine toilet flush volume
- Discuss dishwasher and washing machine use
- Explain High Efficiency Washing Machine Incentives

Exterior/Landscape Survey

For all landscaped properties, the surveyor provides watering tips on how to conserve water in your garden. In single-family homes, landscape watering can be the largest single component of your water consumption. During the warmer months, landscape watering often accounts for over 55% of water use.

The surveyor will:

- Determine grass type
- Review irrigation system
- Identify irrigation problems
- Conduct a "catch can" test on sprinklers in turf area to measure sprinkler head output
- Provide a seasonal watering schedule

The Surveyor will use a soil probe to determine soil type, moisture depth and root growth.
